

OUR GRAYING & GROWING POPULATION

WILL THERE BE ENOUGH HEALTHCARE WORKERS TO TAKE CARE OF THEM?

45 million

By 2050, California's population is projected to reach 45 million people, and the total number of adults aged 65 and older is projected to grow by 4 million, with an increase of 87% from 2012 by 2030.¹

2.8 million

The U.S. will need to hire 2.8 million new healthcare workers by 2025 in order to adequately take care of its aging population. But a persistent shortage of skilled workers will mean hundreds of thousands of positions will remain unfilled.²

65

Americans over 65 use more health services than any other age group.³
